

## **SUPPLEMENTAL LABELING**

### **Chlormet™ Herbicide**

EPA Reg. No. 352-445-85588

## **PREPLANT SHALLOW INCORPORATED APPLICATIONS FOR WEED CONTROL IN WINTER WHEAT IN THE STATES OF TX, OK, KS, NE, AND SD**

### **DIRECTIONS FOR USE**

Chlormet™ herbicide may be applied PREPLANT SHALLOW INCORPORATED to winter wheat at 2/10 to 5/10 oz per acre. Apply Chlormet™ herbicide before winter wheat is planted and incorporate into the top 1 inch of soil. Refer to the Chlormet™ herbicide label for a list of weeds controlled/suppressed. The 5/10 oz per acre rate is only recommended for suppression\* of Bromus species (cheat, downy brome, Japanese brome) and annual ryegrass.

Do not apply Chlormet™ herbicide PREPLANT SHALLOW INCORPORATED to late fall plantings when cold and/or dry weather can cause delayed seedling emergence and/or stress to seedling plants. Under these conditions, wait until crop has emerged and is showing good vigor before making a postemergence treatment. Crop injury may result when PREPLANT SHALLOW INCORPORATED applications of Chlormet™ herbicide are made to wheat seeded less than 1" deep. Chlormet™ herbicide should not be used on soils with a pH below 5.0 as additional crop stress from low pH and aluminum toxicity may result in crop injury.

If suppression of Bromus species or annual ryegrass is not satisfactory, a sequential application of a metribuzin product (such as Lexone DF) may be applied at 3 to 6 oz per acre in the fall once the wheat has reached the 4 to 5 leaf stage of growth and the annual grassy weeds are in the 1 to 3 leaf stage of growth.

Refer to the Chlormet™ herbicide and metribuzin product for additional precautions and rotational crop guidelines.

\*Weed suppression is a visible reduction in weed competition (reduced population and/or vigor) as compared to an untreated area.

Degree of suppression will vary with rate used, size of weeds, and environmental conditions following treatment.
